Special Skills and Specialisation :

- ❖ Very well known and hands on experience to MARC format i.e. Common Communication Format (CCF), UNIMARC, MARC 21 etc.
- ❖ As a project Assistant in the Library reorganization and automation project of the library of the Centre of Indology of E'cole Francaise de Extreme Orient, Pondicherry where I acquired the skills required for creation of Machine Readable Multilingual Bibliographic Records and maintenance of Multilingual On-line Public Access Catalogue (**OPAC**) using personal Computer and **GIST** Multilingual Card and Common Communication Format (**CCF**). I have got sufficient experience to maintain and manage the complete automation of any modern library. The following are the important task of our project.
- ❖ **AACR-2** Stands Anglo-American Cataloguing Rules Revision 2, 1988 edition many different kinds of library have been considerable growth in libraries and

extension of catalogue process, bibliographic services and National Library services for which AACR was established but throughout the world. AACR has been adopted major libraries and agencies in most English Speaking countries and has had considerable influence on the formation or revision of local and national cataloguing rules. AACR has significant effect on the assembly, transmission and catalogue exploitation of bibliographic information both within in libraries and between libraries.

- ❖ **CDS/ISIS** stands for Computerised Documentation System and Integrated Set of Information System. It has manu driven generalized information storage and retrieval system designed specially for the computerized management of structured non-numerical databases. The major advantage of system is that CDS/ISIS is able to manipulate and unlimited number of databases each of which may consist of complete different data elements. The CDS/ISIS user is freed from the expensive task having to design and write computer programs each time required the use of information retrieval techniques. The features of CDS/ISIS require some knowledge and experience with computerized information system once an application has been designed the system, the system may be used persons having had little or no prior experience

- ❖ **GIST** stands for Graphics and Intelligence Script Base Technology. This versatile product, when installed in an IBM PC/XT/AT compatible computer system allows you to simultaneously use by the Indian language with English with all your packages and programs for wide range of computer applications. GIST provides automatic transliteration between all Indian Languages. Sorting and Indexing and many more operations could be done for English only, can now be done for Indian Language with same programs.

- ❖ **USMARC** stands for United States Machine Readable Catalogue. The Standards for the representation and exchange of bibliographic, authority and holdings data in machine-readable form in United States are the three USMARC communications formats. It provides a consider description of each field, each character position of fixed length data element fields and the defined indicators in the variable data fields and the defined indicators in the variable data fields. The components of USMARC formats as follows:
 - ❖ **Leader:** Data elements provide information for the processing of the record. The data element contains number of coded values and identified by relative character position. The fixed length of the leader is 24-character position.
 - ❖ **Directory:** A series of entries contain the tag, length and starting location of each variable field within a record. The fixed length of directory is 12-character position.
 - ❖ **Variable Fields:** It is organized into variable fields each identified by three-character numeric tag that is stored in the directory entry for the field.

The above said USMARC project was undertaken by Roja Muthiah Research Library, Mugappair East, Madras and taken care of **Chicago University Library**,

Chicago, Illinois, USA. The project head was **Mr. James H. Nye**, Chicago University Library, USA.

- ❖ **UNIMARC:** The Universal MARC format specifies the tags, indicators and sub field codes to be assigned to bibliographic records in Machine Readable forms for monographs, serials, cartographic materials, films, music and sound recordings. UNIMARC will eventually be expanded to include manuscripts and other forms of materials. The primary purpose of UNIMARC is to facilitate the International Exchange of bibliographic data in Machine Readable form between National Bibliographic agencies.

The above said project is held in **Delhi Central Secretariate Library, New Delhi** and undertaken by Vergis Electronic Publishing Company, Mumbai. I went there for three months to teach structure of UNIMARC for Project Assistant of the project. The Project head is **Mr. Bryn Head, London**.

- ❖ **The MARC 21 Concise Formats** are officially published online once a year (usually in October through December). It uses red highlights to indicate changes made from the previous published edition. The MARC 21 formats are widely used standards for the representation and exchange of authority, bibliographic, classification, community information, and holdings data in machine-readable form. They consist of a family of five coordinated formats: *MARC 21 Format for Authority Data*; *MARC 21 Format for Bibliographic Data*; *MARC 21 Format for Classification Data*; *MARC 21 Format for Community Information*; and *MARC 21 Format for Holdings Data*. Each of these MARC formats is published separately to provide detailed field descriptions, guidelines for applying the defined content designation (with examples), and identification of conventions to be used to insure input consistency. The *MARC 21 Concise Formats* provide in a single publication a quick reference guide to the content designators defined in each MARC format. It provides a concise description of each field, each character position of the fixed-length data element fields, and of the defined indicators in the variable data fields. Descriptions of sub field codes and coded values are given only when their names may not be sufficiently descriptive. Examples are included for each field.

The above said project is held at **National Library, Kolkotta** and undertaken by Vergis Electronic Publishing Company, Mumbai. I went there for fifteen days to teach structure of MARC21 for the project assistants of the above company.
